

Mediator

Sound files are inserting in a page using the Events box. Sounds can be added as a single Event (eg mouse click on a button will play a sound), or as a multiple event (eg mouse click, show an object and play a sound – *as shown below*).

Sounds can be from the Mediator resources, Windows media or narration recorded using Sound Recorder. If wishing to use narration, the narration must be recorded and saved before opening the Events box.

Inserting a Sound file

- Right click on the button or page which you are going to use to start your sound playing
- Select Events
- Drag Mouse Click into the empty field
- Click on the Multimedia folder
- Drag Sound down into the active field beside Mouse Click

- Click on the small button before the word Path
- Navigate to where the sound file is saved on your network
- Press OK
- Run the page to check it works

Troubleshooting – no sound

Check speakers are on or listen with headphones.
Check the Events box again to make sure you right-clicked on the correct object.
The name of the sound file should appear under the speaker icon in the events box, if it says Sound– no sound file has been selected. To change the sound file, double-click on the speaker icon.
